Contents

- ▶ Check point for safety.
- ▶ Check point for fixing.
- ▶ Check point for usage.
- ▶ Fixing & Wiring.
- ▶ Description & Function.

Check point for safety

1. Check the electric voltage before you operate the boiler.
2. Tele-room controller can be adapted to voltage DC 24-31V form the main controller of boiler.
Do not adapt to another electric outlet AC 220V or other.
3. Make sure to connect the electric part properly. One is for room controller, the other is for telephone.

Check point for fixing

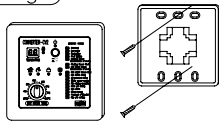

1. Fix the room controller on the wall of main room or living room. The height is about 1.5m.
2. Fix on the properly spot to sense the room temperature.
3. Avoid to fix near the heater or under the sun light, this can cause the torsion of the case and do a harm to the electric parts inside the case.
4. Avoid to fix in the place there is dirty, fume, humid, this can do a harm to the electric parts inside the case.

Check point for usage

1. You had better take care to prevent the metallic parts (Needle, Coin) or in flammables (Paper, Match stick) form entering into the air vent hole of the case. This can make a short-circuit or fire.
2. Do not open the case, and treat your self.
3. Be careful the power line not to exposed in the room.
4. Keep out form the volatiles (Thinner, Benzine, Solvent, ...)
5. Before you polish the room controller, plug the power card out and use a smooth cloth.

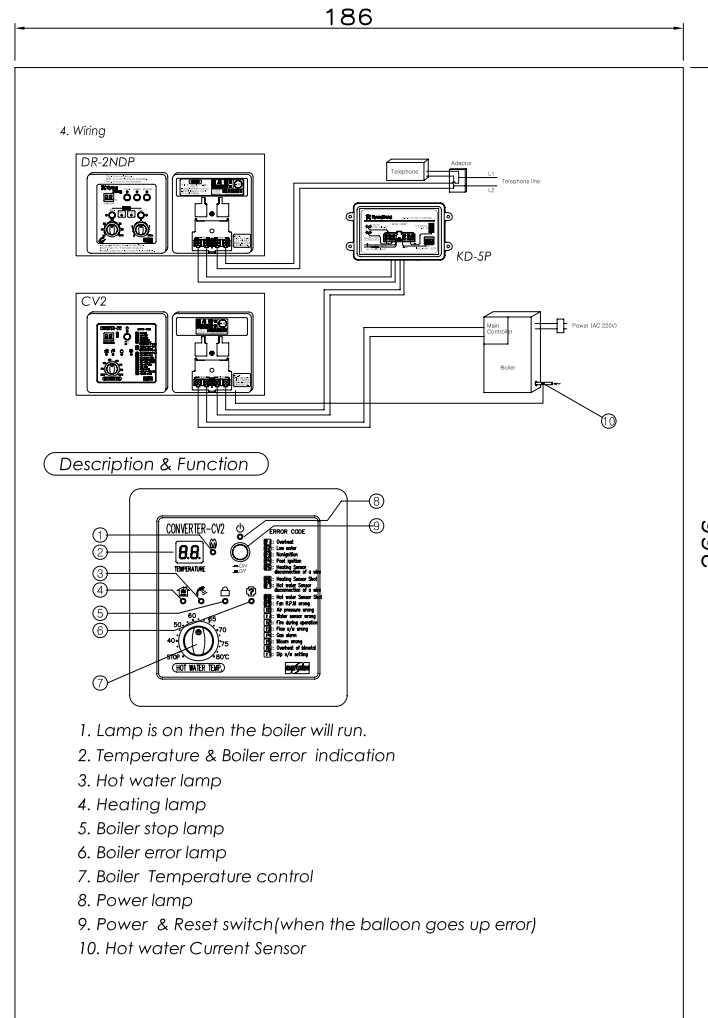

Fixing & Wiring

On the wall

1. Connect firmly the room controller wire (2 Line) form the boiler, to the room controller part in the back of the room controller.
2. Connect firmly the telephone wire to the telephone part in the back side of the room controller.
3. Fix the room controller firmly on the wall, using the room controller bracket or socket.
